

CLIC High Security Welded Mesh

"CLIC High Security Welded Mesh" panels are used for highly sensitive areas, difficult to cut and extremely difficult to penetrate using conventional hand tools, giving high level of perimeter protection.

For obtaining much higher security, the fence can be complimented by extension arms, barbed wire and razor tape on top; either one row of razor tape, 2 rows or several rows.

Life of the welded mesh panels can be further enhanced and aesthetic qualities can be achieved by powder coating in various colours. However, green colour to RAL 6005 is recommended.

Applications:

- Prisons
- Military Installations
- Air, Naval Bases
- Defence Installations
- Oil & Power Installations
- Government Institutions
- General locations like parks, residential property, industrial sites etc.

Specifications

Wire dia	2.0mm to 4.0mm
